

Jim's Helmets: Economic & Impact Study

Mission: To provide free, high-quality motorcycle helmets to children in Cambodia, reducing preventable head injuries and serving as a high-yield public health investment for national development.

1. The Problem: The Pediatric Safety Gap

Currently, less than 1% of Cambodian children wear helmets, despite motorcycles being the primary mode of transport. Misconceptions regarding "spinal damage" and heat exhaustion prevent widespread adoption.

2. Engineering: Tropical Ventilated Design

Our helmets utilize High-Density EPS foam with passive ventilation channels. At 280g, these helmets are lighter than standard school supplies, dispelling myths regarding neck strain.

3. Economic Impact Projection

Investment Case: Every \$1 invested in pediatric helmet safety yields approximately \$10-\$20 in avoided medical costs and long-term disability productivity loss.

Metric	Year 1 (Pilot)	Year 5 (Maturity)
Helmets Distributed	1,000	10,000
Est. Lives Saved	2-4	20-40
Economic Benefit	\$250,000	\$2,500,000

4. The Path to Development

By protecting human capital, Jim's Helmets acts as a foundational pillar for Cambodia's transition to a developed nation, reducing the household-level economic shocks caused by road traffic injuries.
